Recommendation :-

The project report entitled "Online Train Ticket Booking System" submitted by Chandra Shekhar Rawat student of MCA second year in the session 2019-22, towards partial fulfillment of the degree of Master of Computer Applications of Rajiv Gandhi Proudyogiki Vishwavidhyalaya, Bhopal, is a satisfactory account of {his/her/their} work and is recommended for the award of degree.

Mr. Upendra Singh
(Project Guide)
Department of Comp. Tech. & Application

Acknowledgement

We are heartily pleased to acknowledge all those people who have helped us in the successful completion of this project. With great pleasure we express our heartfelt gratitude to our esteemed guide, Mr. Upendra Singh Lecturer Department of Computer Technology & Application, S.G.S.I.T.S. Indore. His persistent encouragement, perpetual motivation, everlasting patience and valuable technical inputs in discussions have enabled the successful completion of this project.

We sincerely wish to express our gratitude to all the members of staff of M.C.A. who have extended their cooperation at all times and have contributed in their own way in developing the project. Successful completion of a project is not an individual effort. It is an outcome of the cumulative effort of a number of persons, each having his own importance to the objective. We are thankful to our parents for being a constant source of encouragement in all our endeavors. Indeed it is their support that helps us through the ups and downs of life. The support and suggestion of our friends are worth appreciation and thankfulness. A blend of gratitude, pleasure, great satisfaction and indebtedness is what we feel to convey to all those who have directly or indirectly contributed to the successful completion of our project work.

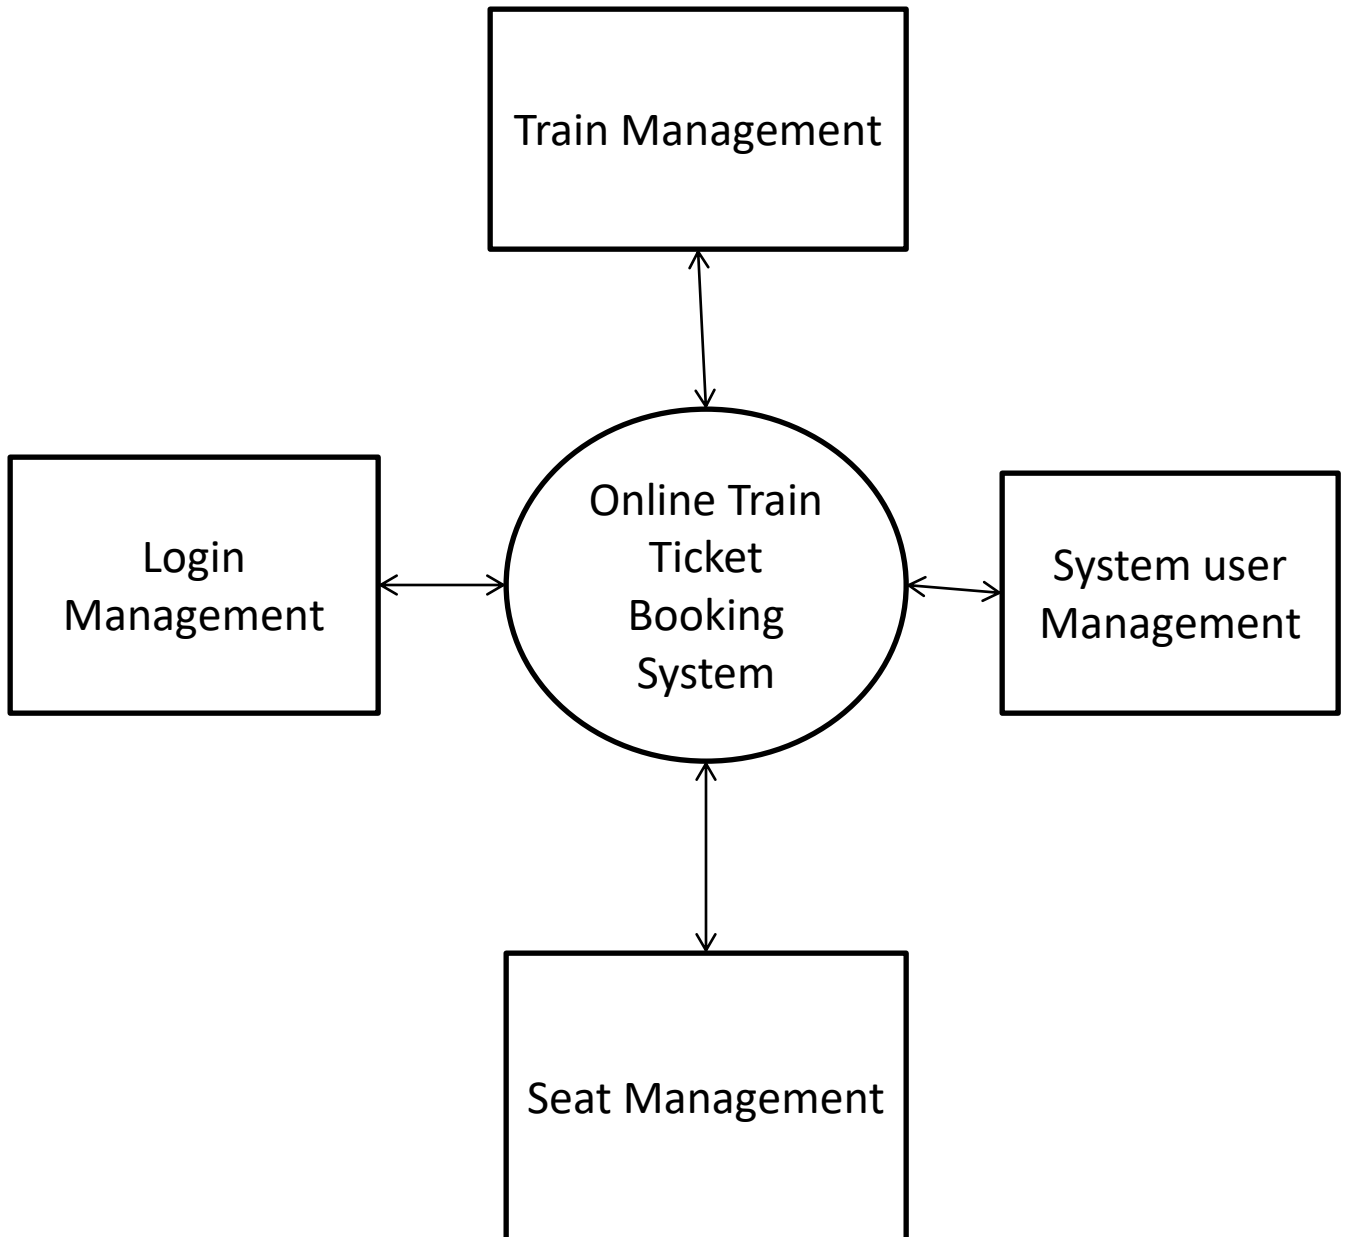

Introduction

Simple Train Ticket Booking System is based on the concept of booking train tickets. There's login system available for this system. This mini project contains limited features, but the essential one.

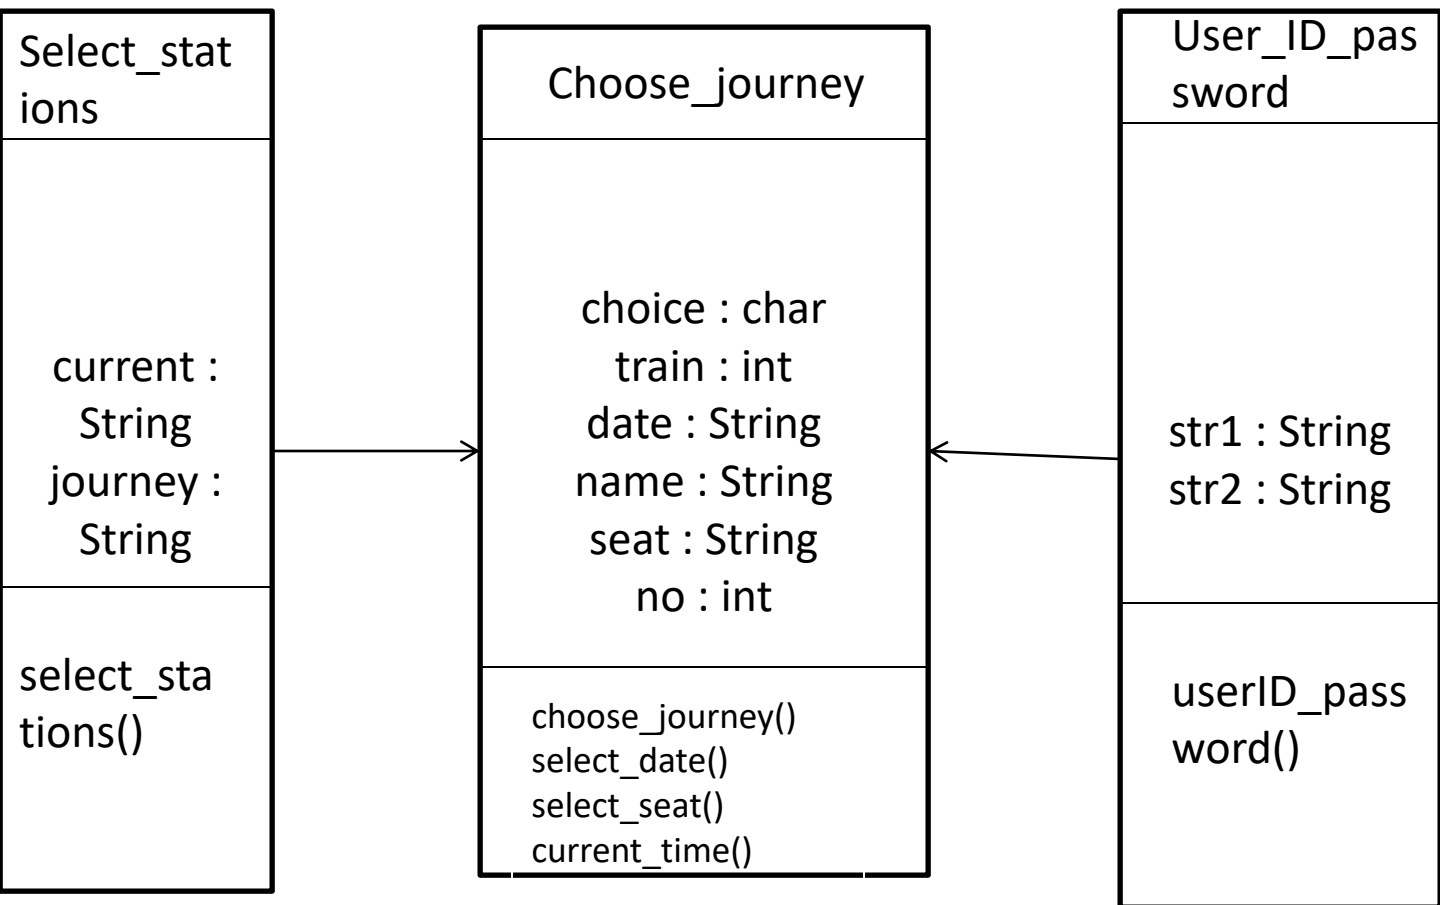

Talking about the features of this simple system, the user can book train ticket. For this, the user has to use login system, and select a stations but this project only available two stations (Gwalior and Indore). Then the user has to select trains and after this select journey date, select seat number, select berth, and enter the name and after this, the booking is done.

The system does not create an external file to store the user's data permanently and temporary. This system is in JAVA programming language, different variables, different classes, use inheritance etc.
